

Landing-zone marker - assembly sheet

DICT_4X4_50 | ID 5 (PAD) | marker face 300 x 300 mm
tiled 2 x 2 = 4 A4 pages | then leave a 50 mm light border (quiet zone) around it

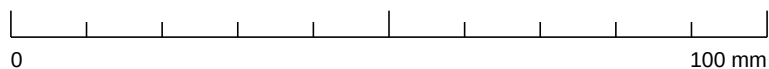

Print

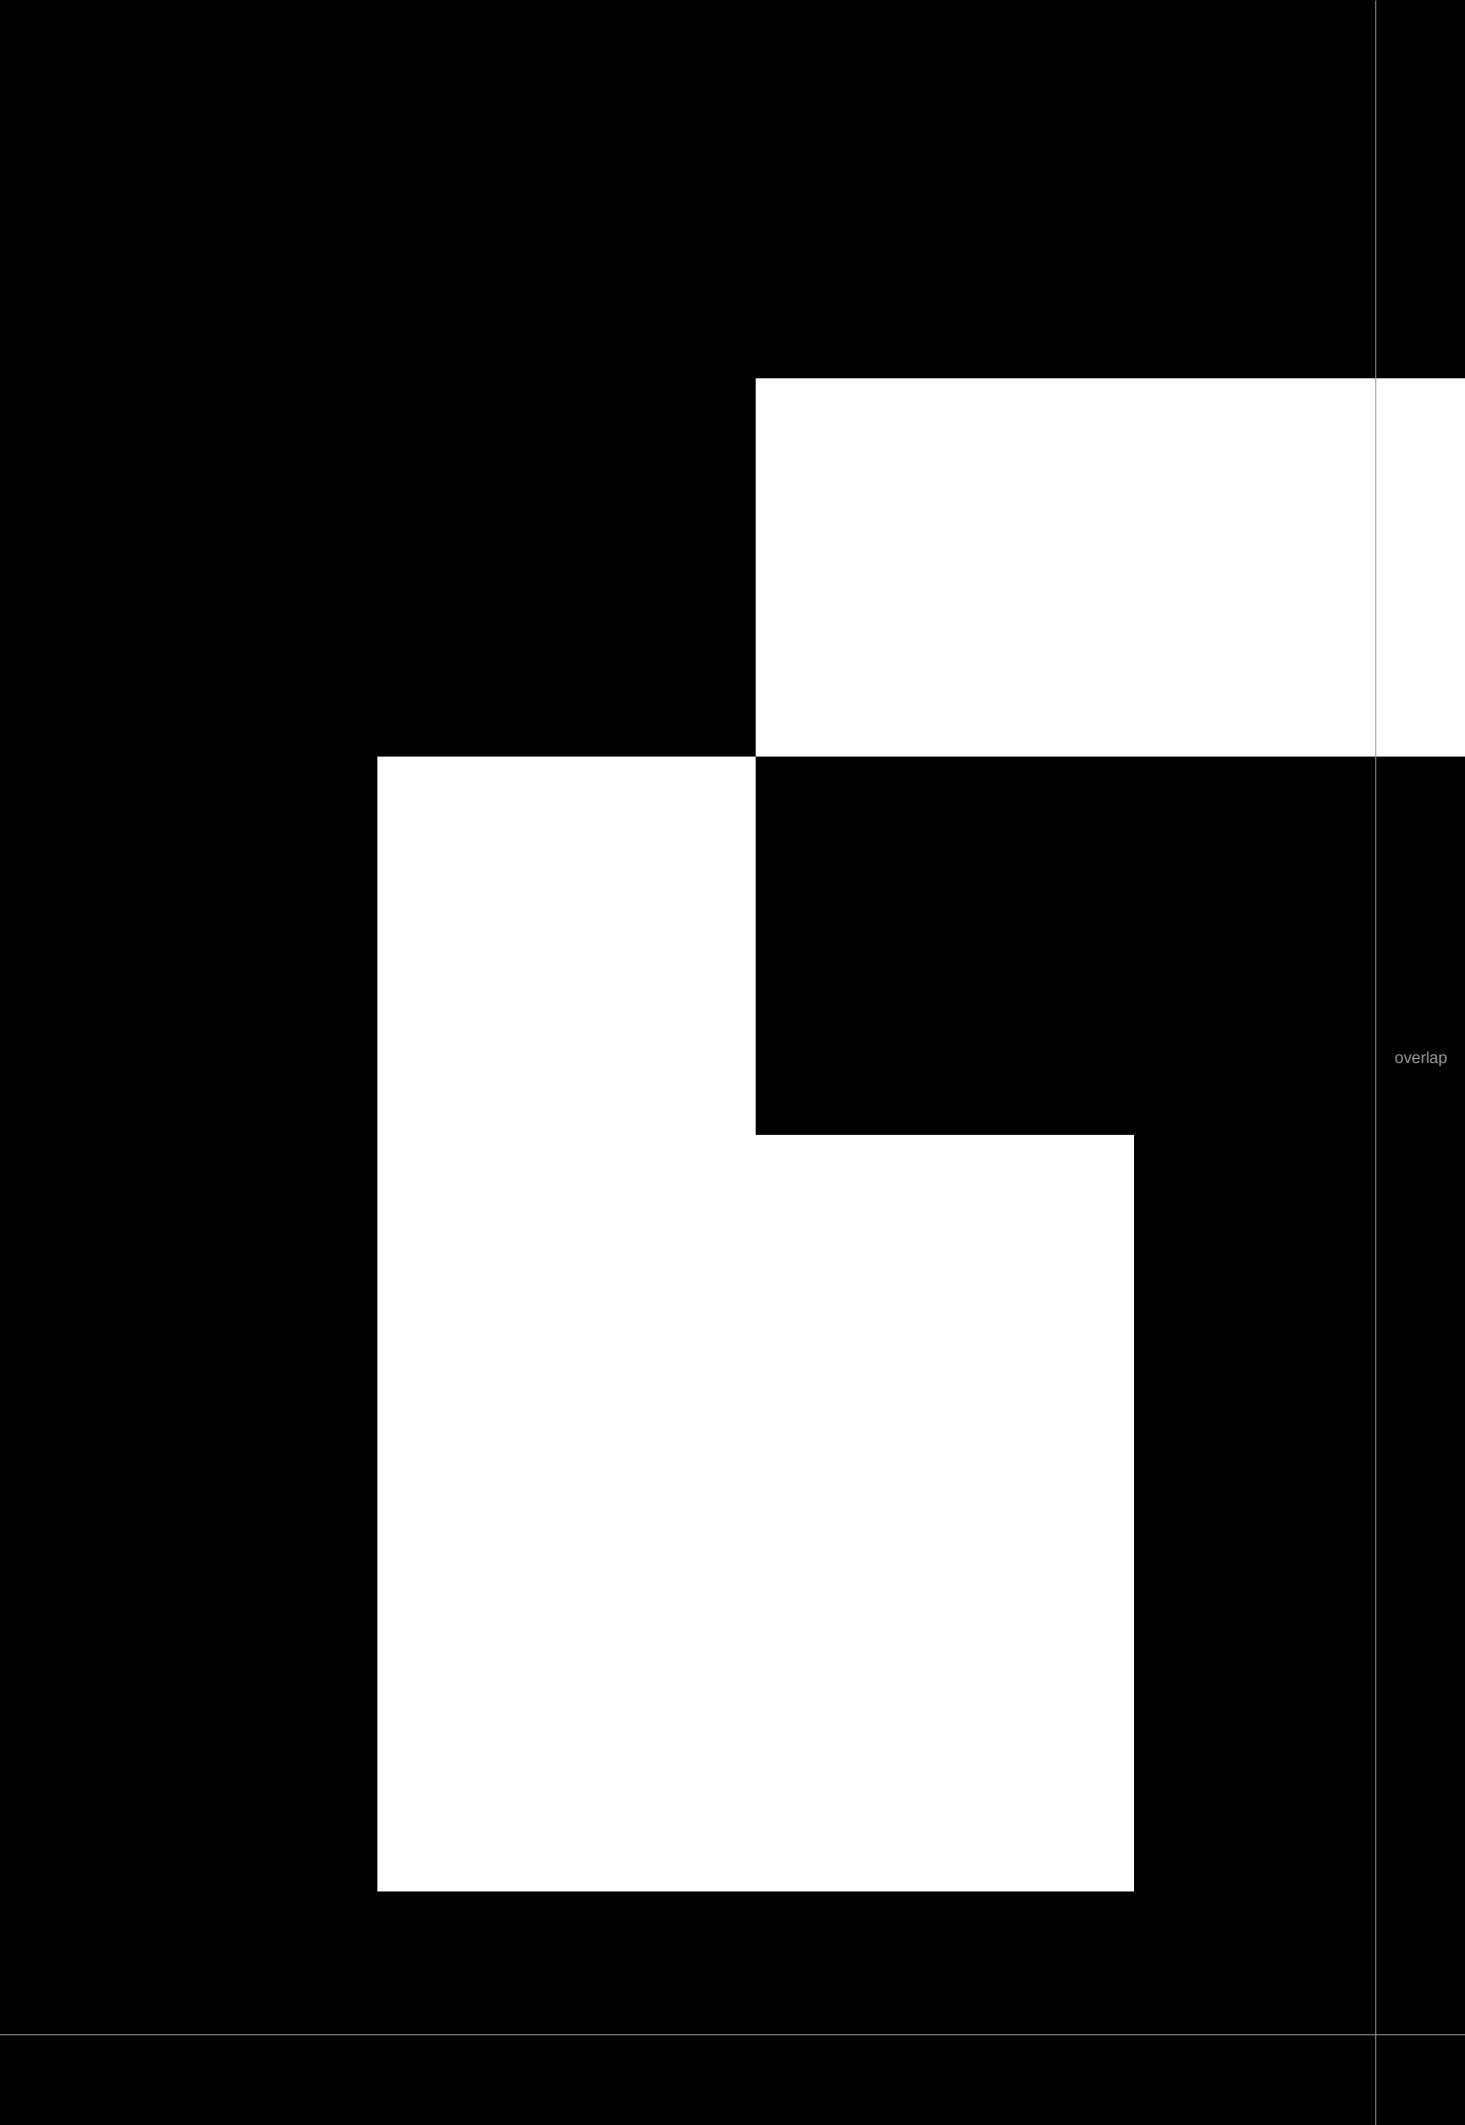

1. Print every page at 100% / Actual size (NOT 'fit' or 'shrink to fit').
2. Check the 100 mm scale bar on a page below with a ruler before cutting.

Assemble

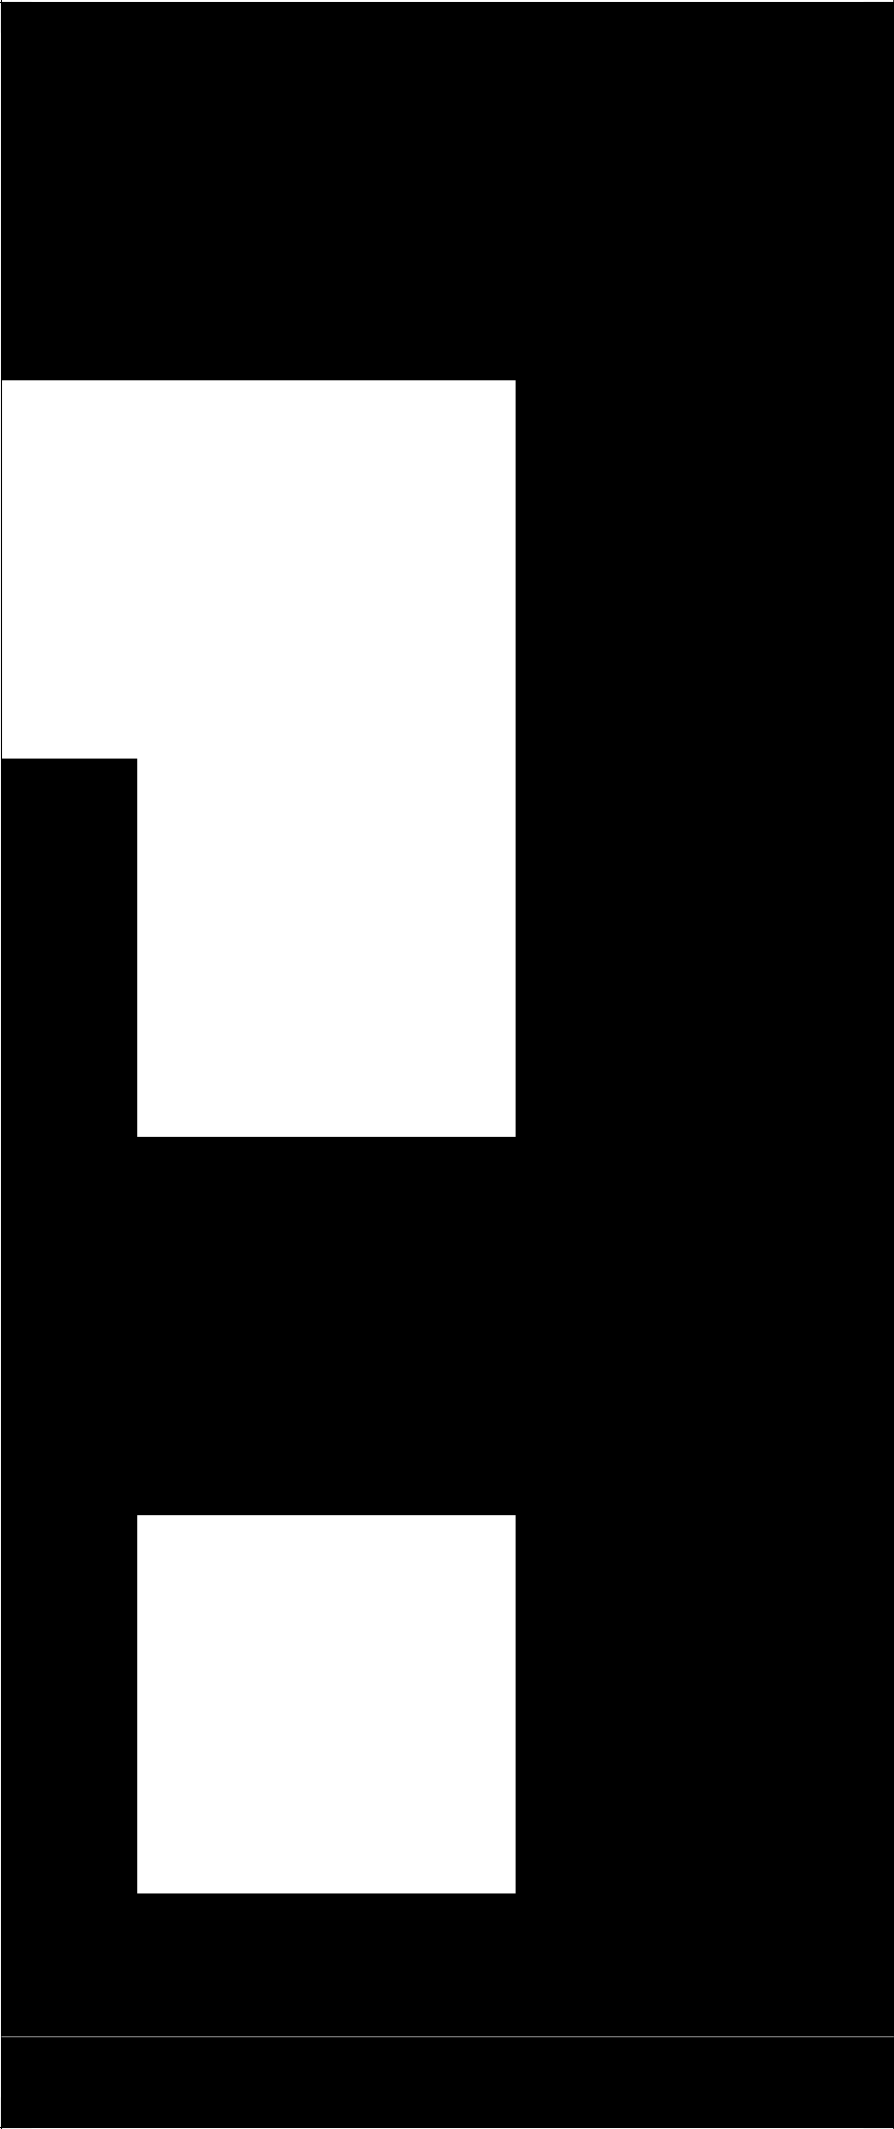

3. Pages are numbered left-to-right, top-to-bottom (see grid above).
4. Each page has a solid crop rectangle and a grey overlap band on its right / bottom edges. Trim the overlap band off the LEFT page and lay it under the grey band of the page to its right / below, matching the art.
5. Tape or glue into one square -- that square is the marker face.
6. Lay it on the floor with ~50 mm of light, clear space on every side (the dashed quiet zone above). Detection needs that clear border.

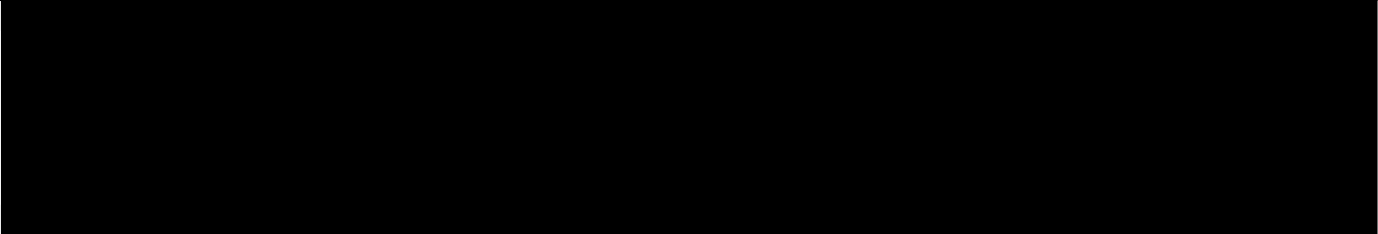

Scale check: this bar must measure exactly 100 mm on paper.
